

SchoolFinder

Full Codebase Audit

Date: June 5, 2026

Scope: frontend/ and backend/

Stack: Next.js 14, NextAuth v5, Express 5, Prisma 5, PostgreSQL

Legend: [OK] = Fully implemented | [PARTIAL] = Partial/stub | [MISSING] = Not implemented | [CLEANUP] = Dead code

1. AUTH & SESSIONS

Feature	Status	File(s)	Notes
Parent login (email/password)	[OK]	ParentLoginContent.tsx, auth.ts	Backend login + NextAuth + sf_parent_token
Parent login (Google OAuth)	[OK]	auth.ts, auth.controller.ts	Rejects non-PARENT roles
Parent registration	[OK]	register/page.tsx	Auto sign-in after register-parent
School admin login	[OK]	SchoolLoginContent.tsx	Credentials only
School admin registration	[PARTIAL]	SchoolRegisterWizard.tsx	No auto sign-in after register
Admin login (/admin-login)	[OK]	admin-login/page.tsx	Hidden route + httpOnly cookie
Forgot password 3-step OTP	[PARTIAL]	forgot-password/page.tsx	UI wired; OTP console-only
OTP email (Brevo)	[MISSING]	lib/mailer.ts	Stub; never called
Resend password reset	[MISSING]	lib/mailer.ts	Orphaned; not imported
Phone OTP backend	[OK]	auth.controller.ts, otp.ts	Fast2SMS + dev console fallback
Phone OTP frontend UI	[MISSING]	—	No UI
JWT blacklist on logout	[PARTIAL]	logout.ts, auth.controller.ts	Backend OK; frontend never calls
Role middleware (FE+BE)	[OK]	middleware.ts, roleCheck.ts	Edge + server + Express guards
SessionHeartbeat	[OK]	SessionHeartbeat.tsx, providers.tsx	Mounted globally
sf_admin_token cookie	[PARTIAL]	admin-auth.ts, api/admin/session	Works; logout no blacklist

Critical gap

School admin: auth.ts strips backendAccessToken for non- with Express JWT auth (issuer: schoolfinder-api). School da

2. SCHOOL FEATURES

Feature	Status	File(s)	Notes
Public listing + filters	[OK]	schools/page.tsx, SchoolFilters.tsx	Multi-select filter backend gap
School detail (slug)	[OK]	schools/[slug]/page.tsx	JSON-LD + metadata
Registration wizard	[OK]	SchoolRegisterWizard.tsx	4 steps; PENDING status
Dashboard: profile	[PARTIAL]	dashboard/school/profile	Token bridge concern
Dashboard: gallery	[PARTIAL]	SchoolGalleryManager.tsx	Cloudinary URL flow
Dashboard: inquiries	[PARTIAL]	dashboard/school/inquiries	Status updates via BFF
Dynamic city/state dropdown	[MISSING]	SchoolFilters.tsx	Free-text only
Custom sections builder	[MISSING]	—	Hardcoded sections
Moderation flow	[OK]	admin/schools, admin.controller.ts	PENDING !' approve/reject

3. PARENT FEATURES

Feature	Status	File(s)	Notes
Dashboard: profile	[OK]	parent/profile/page.tsx	SSR + BFF PATCH
Dashboard: favourites	[PARTIAL]	parent/favourites	BFF DELETE only; read direct
Dashboard: inquiries	[PARTIAL]	parent/inquiries	Uses /api/inquiries/my
FavouriteButton API	[PARTIAL]	FavouriteButton.tsx	Legacy /api/favourites for toggle
InquiryModal	[OK]	InquiryModal.tsx	POST /api/inquiries
School comparison	[MISSING]	—	Not implemented

4. ADMIN FEATURES

Feature	Status	File(s)	Notes
Dashboard stats	[OK]	admin/page.tsx	6 stat cards
School moderation	[OK]	admin/schools/page.tsx	Approve/reject via BFF
Add school wizard	[PARTIAL]	admin/add-school/page.tsx	checkOwnerEmail Prisma bug
User management	[OK]	admin/users/page.tsx	Role + status
Inquiry monitoring	[OK]	admin/inquiries/page.tsx	Read-only
Featured listings admin	[MISSING]	FeaturedSchools.tsx	Newest 6 only
SEO management panel	[MISSING]	lib/seo.ts	Code-driven only

5. API & BFF

ROUTES (16 files)

All routes exist. Partial: /api/parent/profile (PATCH only), /api/
Admin SSR bypasses BFF for: GET /api/admin/stats, /users,

- POST /api/upload — Cloudinary, auth + rate limit
- GET /api/admin/schools — duplicate check (GET only, no auth)
- GET /api/admin/check-owner — owner validation
- POST /api/admin/add-school — reads httpOnly cookie

6. BACKEND API

- 6 route modules — all real Prisma implementations
- GET /api/schools — filters, pagination, cursor mode, cache
- POST /api/admin/add-school — creates APPROVED directly
- Inquiry CRUD — create/list/update OK; no delete/get-by-id
- Legacy /api/favourites — functional with Deprecation header

7. DATABASE & PRISMA

- Schema aligned with controllers for core models
- OTP fields present and used; resetToken legacy/unused
- NextAuth tables (Account, Session, VerificationToken) unused
- Facility models — read only, no write API
- Missing migration_lock.toml
- BUG: checkOwnerEmail uses user.school; schema has owner

8. THIRD-PARTY INTEGRATIONS

Integration	Status	Notes
Resend	[MISSING	Implemented but never imported
Brevo	[MISSING	Commented stub
Fast2SMS	[OK]	Dev console fallback
Cloudinary (frontend)	[OK]	/api/upload working
Cloudinary (backend)	[CLEANU	Stub; no routes use it
Google OAuth	[OK]	Parent only
Razorpay, OpenAI, Maps, PosiHug, Sentry	[MISSING	Not started

9. CLEANUP & DEAD CODE

- nodemailer (backend)
- multer/upload.ts (unmounted)
- bcryptjs (frontend unused)
- mailer.ts (orphaned)
- CredentialsLoginForm.tsx
- ApproveRejectButtons.tsx
- reset-password/page.tsx (broken)
- Only TODO: mailer.ts:86

10. SEO & PERFORMANCE

- sitemap.ts + robots.ts — OK
- JSON-LD on home + school detail
- ISR: listing 60s, detail 3600s; no revalidateTag on moderation
- Suspense/skeletons on key pages; 3 loading.tsx routes

11. ENVIRONMENT & DEPLOYMENT

- frontend/.env.example + backend/.env.example — complete
- render.yaml — missing Resend/Fast2SMS in blueprint
- vercel.json — OK (bom1, security headers)
- validateStartupEnv — requires Cloudinary on backend (unused); Resend warn-only

PRIORITY TODO LIST

P0 — Blocking

- Fix school admin backend token bridge (JWE vs JWT)
- Wire forgot-password OTP email (Brevo or Resend)
- Fix checkOwnerEmail Prisma relation (ownedSchools)

P1 — Easy wins

- Call POST /api/auth/logout on frontend logout
- Migrate FavouriteButton to BFF /api/parent/favourites
- Remove/fix legacy /reset-password page
- School registration auto sign-in
- revalidateTag on approve/reject
- Backend validation on addSchoolDirect

P2 — Nice to have

- Dynamic city/state dropdown
- Phone OTP UI
- School comparison
- Featured listings admin
- SEO admin panel
- Custom sections builder
- Facility management API
- Admin inquiry status updates
- Webhook ISR

QUESTIONS FOR OWNER

- School admin token strategy: cookie vs persist JWT vs fix mintBackendJwt?
- OTP email provider: Brevo or Resend?
- Phone OTP: build UI or remove endpoints?
- Featured schools: manual curation or newest 6?
- Remove legacy /api/favourites after migration?
- Facilities: build picker or drop from UI?
- School comparison: build or remove marketing copy?
- Remove Cloudinary from backend validateStartupEnv?
- User disable: sentinel phone vs isActive column?
- ISR: accept 1-hour cache or webhook revalidation?

Overall Summary

Public discovery, parent flows, and admin panel are largely built. Largest risks: school admin JWT bridge (likely broken SSR/BFF), non-functional password reset email, and checkOwnerEmail Prisma bug. Comparison, dynamic filters, custom sections, and featured/SEO admin are planned but not implemented.
